The nucleotide sequence of this BAC clone was generated by combining Moneanto and RGP-Japan sequencing data.
NOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

genomic sequence was searched against NCBI NonRedundant Protein database, nr (ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA sequence database at RGP or DDBJ. Protein homologies of the coding regions were searched against NCBI NonRedundant Protein database with BLASTP. ESTS represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no. and RGP clone ID. Full-length cDNAs represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein'. A gene without significant homology to any protein but with full-length cDNA or EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard. A gene predicted by a single gene prediction program is also classified as a probable 'hypothetical' protein and is included as a miscellancous feature of the sequence.

The orientation of the sequence is from T7 to SP6 of the PAC clone. This sequence of P0681F05 clone has an overlap with OSJNBa0007H12 (DDBJ: AP0053B5) at 3' end. Detailed information on overlap and assembly quality together with annotation of this entry is available at http://rgp.dna.affrc.go.jp/GenomeSeq.html.

This invention relates to a novel isolated regulatory nucleic acid sequence that is useful in the field of plant molecular biology. Specifically, it refers to a regulatory gene of the rice GOS2 gene that can drive expression of an associated nucleic acid sequence in a non-monocotyledonous plant or plant cell. The present invention describes introducing a regulatory sequence that results in constitutive expression (with levels similar to that of CaMV 35S) of an isolated or endogenous

nucleic

acid sequence in a transgenic non-monocotyledonous plant.

Use of a regulatory nucleic acid sequence for driving expression associated nucleic acid sequence in a non-monocotyledonous plant

of an or plant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ş
                                                     The patent discloses a DNA molecule, useful as matrix attachment region (CMAR) or scaffold attachment region, to increase the expression of genes cintroduced in transformed plants. MARs are located in non-transcribed cregions of genes and form the physical boundaries of individual DNA creases. They are rich in adenosine and thymine bases and contain certain cronserved sequence elements and structural features. They are about 300-cc conserved sequence by use of MAR. They can also reduce the position crease of the rice crease formation vector gGOS2-hpt, that contains a hygromycin selectable crease formation vector gGOS2-hpt, that contains a hygromycin selectable crease of GOS2 transcription initiation region GUS structural gene/nos 3 untranslated cregion). The GOS2 transcription initiation region this construct is comprised of 1010 bp of promoter and 170 bp of untranslated 5 leader credion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 An isolated DNA molecule for use as a matrix attachment region increase expression of genes introduced in transformed plants c 298 base pair sequence described in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matrix Attachment Region; MAR; rice transformation vector; pGOS2-hpt; scaffold attachment region; gene expression; transgenic organism; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAD01285

                                                                                                                                                                                                                                      The patent discloses a DNA molecule, useful as matrix attachment region (MAR) or scaffold attachment region, to increase the expression of genes introduced in transformed plants. MARs are located in non-transcribed regions of genes and form the physical boundaries of individual DNA loops. They are rich in adenosine and thymine bases and contain certain conserved sequence elements and structural features. They are about 300-2000 bp in length. Increased levels of expression of DNA introduced into plants can be achieved by use of MAR. They can also reduce the position effect in transgenic organisms. The present DNA sequence is the rice transformation vector pArGOS2Af-hpt, identical to the vector pGOS2-hpt, except that it contains a MAR dimer-2 positioned 5' to the GOS2 transcription initiation region and the MAR dimer-1 positioned 3' to the nos 3' UTR (untranslated region). This vector is used to efficiently transform monocot plants like rice
                                                                                                                                                                                                    Sequence 10629
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      An isolated DNA molecule for use as a matrix attachment region to increase expression of genes introduced in transformed plants comprises 298 base pair sequence described in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-DEC-1998;

Improving plant growth characteristics, e.g. increased yield, increased growth rate, or modified architecture, comprises increasing expression, activity and/or levels in a plant of B-type cyclin dependent kinase.

Disclosure; SEQ ID NO 15; 79pp; English.

cc protein sue, or modified architecture, comprises increasing expression in cc a plant of a nucleic acid encoding a B-type cyclin dependent kinase (CDK) protein and/or increasing activity and/or levels in a plant of a B-type CC UNX protein. INDEPENDENT CLAIMS are also included for: plants obtained comprising the method above; construct comprising (1) a B-type CDK company the method above; construct comprises at least one of the conding a CDK mutant, which CDK mutant comprises at least one of the capable of driving expression of the nucleic acid (1) or (ii), and capable of driving expression of the nucleic acid of (1) or (ii), and coptionally (iv) a transcription termination sequence; a method for producing transgenic plant having improved growth characteristics, e.g. increased growth rate, or modified architecture, which CC corresponding wild type plants; transgenic plant having improved growth characteristics of CC corresponding wild type plants; transgenic plant having improved growth characteristics of CC comprising a protein comprising a sequence of 309, 311, or 315 amino CC capable (FWEN SED ID NOS: 2-6), or its hamologue, derivative, or active fragment, used as a growth regulator; a sequence of 309, 311, or 315 amino CC comprising any of the sequence of 309, 311, or 315 amino CC comprising any of the sequence of 309, 311, or 315 amino CC comprising any of the sequence of 309, 311, or 315 amino CC comprising any of the sequence of 309, 311, or 315 amino CC comprising any of the sequence of 309, 311, or 315 amino CC comprising any of the sequence of 309, 311, or 315 amino CC comprising any of the sequence of 309, 311, or 315 amino cC comprising any of the sequence of 309, 311, or 315 amino CC comprising any of the sequence of 309, 311, or 315 amino CC comprising any of the sequence of 309, 311, or 315 amino CC comprising any of the sequence of 309, 311, or 315 amino CC comprising any of the sequence of the disclosure, or instants bind to CC comprise and the comprise of 309, 310, or 300, or 300, or 300, or Improving plant growth characteristics, growth rate, or modified architecture, or e.g. increased yield, increased Cipied in the disclosure. Preferred Method: Increasing expression is effected by introducing and expressing in a plant a B-type CDK nucleic acid. The B-type CDK is derived from a plant, algal, or fungal source. The B-type CDK is derived from a plant, algal, or fungal source. The B-type CDK derived from a plant algal, or fungal source. The B-type CDK derived from a plant algal, or fungal source. The B-type CDK derived from a plant algal, or fungal source. The B-type CDK derived from a plant algal, or fungal source. The B-type CDK derived from a plant is from a diocyledonous plant. Comprises a sequence of so for fungal plant is from a diocyledonous plant. The B-type CDK is a class 1 B-type CDK is a class 2 B-type CDK. The B-type CDK is a class 2 B-type CDK. The B-type CDK bit is a class 1 B-type CDK preferably a CDK B1.1 CC comprises a sequence of S05 by (S00 ID No: 1), or its portion, or a mucleic acid comprises a sequence of S05 by (S00 ID No: 3), or its portion, or a mucleic acid comprises a sequence of S05 by (S00 ID No: 3), or its portion, or a mucleic acid comprises a sequence of S05 by (S00 ID No: 3), or its portion, or a mucleic acid comprises a sequence of S05 by (S00 ID No: 3), or its portion, or a mucleic acid comprises a sequence of S05 by (S00 ID No: 3), or its portion, or a mucleic acid comprises a sequence of S05 by (S00 ID No: 3), or its portion, or a mucleic acid comprises a sequence of S05 by (S00 ID No: 3), or its portion, or a mucleic acid comprises a sequence of S05 by (S00 ID No: 3), or its portion, or a mucleic acid comprises a sequence of S05 by (S00 ID No: 3), or its portion, or a mucleic acid comprises a sequence of S06 by (S00 ID No: 3), or its portion, or a mucleic acid comprises a sequence of S07 by (S00 ID No: 3), or its portion, or a mucleic acid comprises a sequence of S07 by (S00 ID No: 3), or its portion, or a mucleic acid comprises a sequence of S07 by (S00 ID No: 3), or its portion, or a mucleic acid comprises a sequence of S07 by (S00 ID No: 3), or its portion, or a mucleic ac degenerate as a result of the genetic code, (v) allelic variants of (i) to (iv), where the allelic variant encodes an amino acid comprising at least one of the 7 amino acid position changes or at least one of the 8 amino acid position changes listed in the disclosure, or (vi) alternative splice variants of nucleic acids of (i) to (v), where the alternative splice variants encodes an amino acid comprising at least one of the 7 amino acid position changes or at least one of the 8 amino acid position changes listed in the disclosure; and a CDK mutant comprising (1) an amino acid sequence of SEQ ID NOS: 9-13 where the fragment comprises at least one of the 7 amino acid position changes or at least one of the 7 amino acid position changes or at least one of the 8 amino acid position changes or at least one of the 7 amino acid position changes or at least one of the 8 amino acid position changes

                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a glyphosate resistant rice 5-enolpyruvylshikimate phosphate synthase (EPSPS) gene. This gene can be used to produce plant tissue and/or morphologically normal fertile whole plants which are tolerant or resistant to glyphosate herbicide, and in the production of a herbicidal target for the high throughput in vitro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel polynucleotide encoding the rice 5-enolpyruvylshikimate phosphate synthase, used to produce glyphosate tolerant or resistant plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 29-APR-1999;

CC (EBYSES) genomic DNA (AAC87188). The invention also relates to an CC expression cassette comprising, in the 5'-3' direction, one or more Crice EBYSE promoter, genomic DNA encoding a rice EBYSE controplast transcriptional enhancer elements selected from AAC87190-C87196), the CC rice EBYSE promoter, genomic DNA encoding a rice EBYSE controplast transit peptide, genomic DNA encoding a EBYSE protein modified such that CC it is resistant to glyphosate (AAC87189), and a transcriptional CC terminator. The glyphosate resistant EBYSE contains a region (AAB29793) containing two amino acid substitutions relative to the corresponding CC wild-type region (AAB29792). The invention also encompasses plant genomic CC EBYSE sequences identified via screening with a rice EBYSE intronic CC sequence; vectors and host plant cells comprising a nucleic acid sequence of the invention; transgenic plants (and tissues and seeds thereof) CC comprising a nucleic acid sequence of the invention, optionally further CC rematode, stress or herbicide resistance protein; and methods of CC constructs of the invention are used to produce a wide variety of CC morphologically normal, glyphosate resistant plants. The glyphosate cresistant plants produced are particularly maize, soybean, cotton, sugarbeet and canola, but also other field crops, fruits and vegetables, turf and forage grasses and nut-producing plants. The plants are optionally resistant to insects, fungi, viruses, bacteria, nematodes, stress, desiccation and/or other freield crops, fruits and vegetables, cotton and of a herbicidal target for the high throughput in vitro cot of the invention cassette the high throughput in vitro.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 29-JUL-1999;

The invention comprises DNA sequences which confer an altered metabolic characteristic when they are expressed in a plant. The DNA sequences of the invention are useful for producing plants with an altered metabolic characteristic, such as: altered acid metabolism, alcohol metabolism, fatty acid metabolism, branched fatty acid metabolism, alkaloid or other base metabolism, altered anino acid metabolism, altered ester metabolism altered glyceride metabolism, altered phenolic metabolism, altered carbohydrate metabolism, altered sterol, oxygenated terpene, or isoprenoid metabolism, altered sterol, oxygenated terpene, or metabolism, ketone or quinone metabolism. The DNA sequences of the invention may be used to provide disease resistance in a plant and gene shuffling or sexual PCR procedures. The present nucleic acid represents
                                                                                                                                                                                                                                                                                                                                                 Novel genes that confer altered metabolic characteristics in Nicotiana benthamiana plants, useful for altering the levels of metabolites e.g. acids, fatty acids, amino acids, carbohydrates, hydrocarbons and stero
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Weglarz T,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          wet leaf, stunting, elongation and texture phenotypes, which are thought will be agronomic traits beneficial to the farmer. As such, these novel phenotypes can affect growth regulation i.e. useful for creating dwarf varieties, exhibit resistance to insects or heat stress, confer changes in pigment content such that plants have enhanced vitamin production or delayed senescence and also for example produce plants that control the production of ethylene. Furthermore, the present invention comprises generating transgenic plants, as well as reproducibly altering the visual phenotype of plant seeds, plant tissues and plant cells containing the polynuclectides described herein. This polynuclectide is a homologue of a DNA sequence that confers an altered visual phenotype when expressed in plants of the method of the immention.

                                                                                                                                                                                                                                                                                                                                                      Plant DNA sequence which confers altered metabolic characteristic #6610.
                                                                                                                                                                                                                                                                                                                                                                                             06-MAY-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 724 BP; 183 A; 183 C; 171 G; 187
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to the identification, who phenotypes in plants. nucleic acid molecules that confer altered visual phenotypes in plants. Specifically, it refers to modifications of plant architecture and/ or leaf surface features in plants, such as chlorotic, bleaching, etching, leaf surface features in plants, such as chlorotic, bleaching, etching, leaf surface features in plants, such as chlorotic, which are thought
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel isolated nucleic acid derived from Nicotiana benthamiana, Oryzae sativa, Saccharomyces cerevisiae, and Papaver rhoeas, useful for conferring altered visual phenotypes in plants.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC nucleic acid molecules that confer altered visual phenotypes in plants. CC Specifically, it refers to modifications of plant architecture and/ or CC leaf surface features in plants, such as chlorotic, bleaching, etching, CC wet leaf, stunting, elongation and texture phenotypes, which are thought will be agronomic traits beneficial to the farmer. As such, these novel CC phenotypes can affect growth regulation i.e. useful for creating dwarf CC varieties, exhibit resistance to insects or heat stress, confer changes in pigment content such that plants have enhanced vitamin production or CC delayed senescence and also for example produce plants that control the production of ethylene. Furthermore, the present invention comprises CC generating transgenic plants, as well as reproducibly altering the visual CC phanotype of plant seeds, plant tissues and plant cells containing the CC polynucleotides described herein. This polynucleotide is a homologue of a DNA sequence that confers an altered visual phenotype when expressed in CC plants, the method of the invention.

                                                                                                                                                á
                                                                                                                                                                                                                                                             The invention relates to plant nucleotide sequences that direct seed, cleaf- and/or stem-, panicle-, root- or pollen-specific or -preferential or or constitutive transcription of an operatively linked nucleic acid or constitutive transcription of an operatively linked nucleic acid correctly segment. The invention also relates to a method for augmenting a plant genome and a method of identifying a gene, where its expression is caltered in the seed, leaf, stem, panicle, pollen, root or is constitutive in a plant cell. The plant is a cereal, e.g. soybean, alfalfa, sunflower, canola, cotton, peanut, tobacco or sugar beet, preferably maize, barley, canola, cotton, peanut, tobacco or sugar beet, preferably maize, barley, cencode are useful for manipulating crop plants to alter or improve checking to incur seistance to insecticides, viruses or fungi, and to proteins, to incur resistance to insecticides, viruses or fungi, and to incur stress tolerance (e.g. salt, cold or drought) to ensure the plants have a high nutritional value with reduced apical dominance or dwarfism, carly flowering or altered metabolic pathways. This sequence represents a plant nucleic acid of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel abiotic stress responsive polynucleotides and polypeptides. Also disclosed are vectors, expression cassettes, host cells, and plants containing such polynucleotides. Also disclosed are methods for using the polynucleotides and polypeptides to alter the responsiveness of a plant to abiotic stress. The invention is useful in agriculture. The nucleic acid is useful for determining whether a test plant has been exposed to an abiotic stress condition. It is also useful for selecting an agent that alters abiotic stress regulated polynucleotide expression in a plant cell, and to identify a homolog or ortholog to an abiotic stress responsive polynucleotide. The nucleic acid molecule and the polypeptide encoded by it are useful in altering the responsiveness of a plant to an abiotic stress, sational forms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 2000 BP; 676 A; 404 C; 358 G; 562 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to novel abiotic stress responsive polynucleotides cand polypeptides. Also disclosed are vectors, expression cassettes, host cells, and plants containing such polynucleotides. Also disclosed are methods for using the polynucleotides and polypeptides to alter the captions of a plant to abiotic stress. The invention is useful in agriculture. The nucleic acid is useful for determining whether a test plant has been exposed to an abiotic stress condition. It is also useful for selecting an agent that alters abiotic stress regulated polynucleotide expression in a plant cell, and to identify a homolog or ortholog to an abiotic stress responsive polynucleotide. The nucleic acid molecule and the polypeptide encoded by it are useful in altering the responsiveness of a plant to an abiotic stress, such as cold stress, salt stress, osmotic stress or any of their combinations. The present sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                           Matches 215;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 15
                                                                The invention relates to cancer-associated proteins (CAP) and the cancer-associated (CAP) nucleic acids encoding them. The invention also relates to a method for treating cancers involving administering to a patient an inhibitor of CAP, and a method of screening for anticancer activity in a potential drug involving providing a cell that expresses a CA gene, contacting a tissue sample derived from a cancer cell with an anticancer drug candidate and monitoring the effect of the anticancer drug candidate on expression of the CA gene. The CAP proteins are useful for detecting cancer associated with expression of a CAP protein in a test cell sample and for screening for a bioactive agent capable of modulating the activity of a CAP protein. The CAP protein are useful for diagnosing cancer, involving determining the expression of a CAP nucleic acid in a tissue. This sequence represents a human CA gene of the invention. Note:

The sequence data for this patent did not form part of the printed accordance.
                                                                                                                                                                                                                                                                                                                                                                           Novel human cancer associated protein encoded within open reading f of cancer associated gene, useful as targets for diagnosing cancer.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
